COPILOT HEADSTART

Every leader today is rethinking their business priorities amidst a constantly changing environment – seeking to grow market share and retain customers while doing more with less. At the same time, every worker is facing a new wave of work-related pressures: finding the required information, being creative and continuously up-skilling.
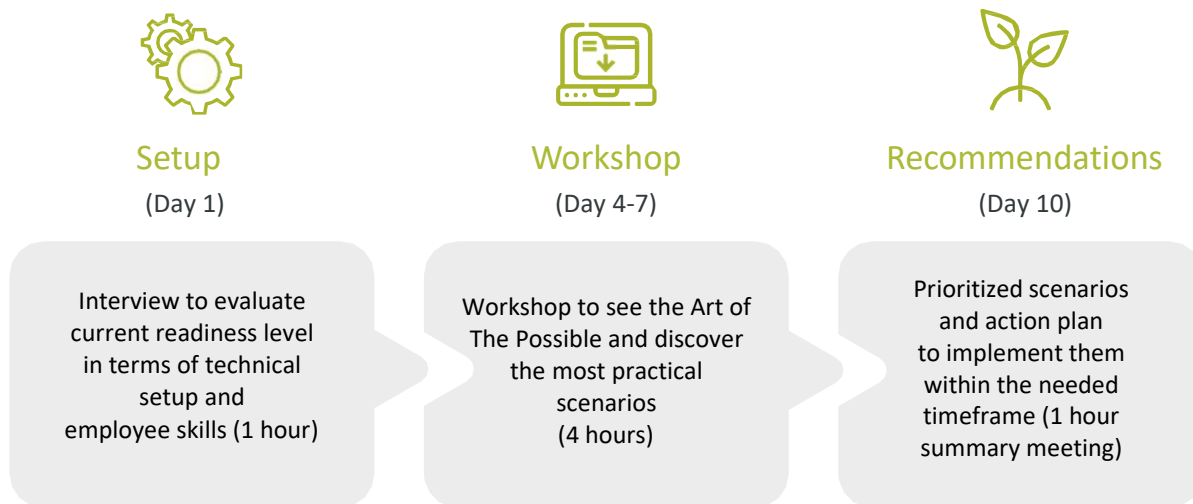

To be competitive, businesses must empower their employees with AI tools that are becoming a commodity.

AI tools can automate tasks, enhance productivity, improve decisionmaking, and facilitate growth. However, many employees don't know how to use AI tools effectively. This can lead to missed opportunities, wasted resources, and lower performance.

Copilot Headstart will give your innovation leadership team:

- Executive level understanding of current workplace AI technology landscape and employee readiness;

- Ability to make well educated tactical decisions to enable employee AI use habits to meet long and midterm strategical goals;

- Recommended plan on training topics, scope, schedule and split across employee groups for the first iteration.

Planning for headstart

Setup
(Day 1)

Interview to evaluate current readiness level in terms of technical setup and employee skills (1 hour)

Workshop
(Day 4-7)

Workshop to see the Art of The Possible and discover the most practical scenarios
(4 hours)

Recommendations
(Day 10)

Prioritized scenarios and action plan to implement them within the needed timeframe (1 hour summary meeting)

What you can expect:

✓ Experience what various Microsoft Copilots can help achieve for your organization through examples and demonstrations.

✓ Identify potential blockers and challenges ahead of a broader AI use, including people, data, compliance and IT readiness aspects.

✓ Receive actionable plan to understand what your organization specifically needs to widely start using Copilot.
